Using the Turning Point Integration in D2L

Using D2L’s integrated Turning Point registration is easy! Just follow these steps to set up a link for your students and you are on your way.

Step 1 – Create a new News item

Log in to D2L and head to the relevant course page. Select the arrow to the right of “News” and choose “New News Item”.

![D2L Course Page](image)

Step 2 – Setting up an External Learning Tool link

You will want to add a headline and content text for your external link.

We recommend a headline that clearly indicates that this is the clicker registration tool to be used by the students.

Please note the following items that should be present in the content section in order to avoid problems registering:

1. Students must be logged in on their own D2L account
2. The security code on the registration page must be filled out to submit registration
3. The student must press the Final Submission button in order to register

Once you have entered a headline and content text, press the Quicklink icon located in the set of buttons above the content section.
In the Quicklink window choose External Learning Tool from the drop-down menu

A second drop-down menu will appear. Choose Turning Technologies Registration Process (Production) from the options

Provide a link caption. We recommend “Click here to register”

Select New Window from the options given

Your window should look like this:
Press Insert to insert the link into the content section of your news item

Scroll down and press Publish to create your news item
You should now be able to see the clicker registration item in your newsfeed for the course.

Students can now click the link provided and register their devices.
