Connecting Your Computer to UAWiFi
Mac OSX

Users who connect to the campus network, wired or wireless, should be in compliance with the Acceptable Use of Computers and Networks policy, including security measures.

UAWiFi is your best wireless choice on campus for both speed and security.

1. Go to the AirPort menu on the Menu Bar.

You will see UAWiFi as an available wireless connection. If you do not see UAWiFi then the wireless connection is not available from your location.

Select UAWiFi from the drop-down menu.

2. Enter your UA NetID and password in the popup log-in window and click OK.
3. A window warning about the security certificate will pop up. Click **Continue**.

**Continue** needs to be clicked within 60 seconds, or the connection attempt will time out and fail.

![Certificate Warning](image)

You are now on the UAWiFi wireless network!
