IMAP/POP Configuration Guide

For iOS

VERSION 1.0
Configuring iOS for IMAP

Click Settings from the home screen.

Next, choose the option that says Mail, Contacts, Calendars.
You will be given a list of all the current email accounts in the phone. Choose the option **Add Account...** to start setting up your account using IMAP.

Select **Other** to manually configure the settings for the account and specify which ports are being used.
Next, enter the following information:

- **Description**: This will be the name of your email account
- **Host Name**: mail.catnet.arizona.edu
- **User Name**: NetID
- **Password**: NetID Password
- **Outgoing Host Name**: smtpgate.email.arizona.edu
- **User Name**: NetID
- **Password**: NetID Password

After this completes, the mail account will be added into your iOS device and you will now see it listed under the Mail accounts in the phone.

Once completed, you will need to prepare the proper settings for the **Outgoing Server**.

Select the account name from under the **Mail, Contact, Calendars** option.
Scroll the bottom of the page and select SMTP smtpgate.email.arizona.edu. This is where you can manage the Outgoing email settings. After choosing this option, you will want to click on the option located under Primary Server. It will also show smtpgate.email.arizona.edu.

*Note:* The incoming server settings may be left alone in this situation.
- Enter your **NetID** in the **User Name** field
- Enter **Password** into the **Password** field
- Set the **Server Port** to **587**. If it is not already set at this value, you will want to change it to **587**.
- Click **Done**

After this you are all set! You will have successfully set up the new mail account on IMAP using the new configuration.
