Connecting Your Computer to UAWiFi
Snow Leopard

UAWiFi is your best wireless choice on campus for both speed and security.

- AirPort menu > UAWiFi

- Enter your NetID and password, and then click OK
• Select, **When using this certificate: Always Trust**, and continue. You should then authenticate normally.
• The server name may show up as **sawfish.catnet.arizona.edu** or **guitarfish.catnet.arizona.edu**. Both are valid and should be accepted.
If you are having problems connecting to UAWiFi, here is how to remove UAWiFi from your list of saved networks.

- **Turn AirPort OFF**

  ![AirPort menu screenshot]

- **Go to AirPort menu > Open Network Preferences…**

  ![Network Preferences window screenshot]

- From the Network Preferences window, select AirPort from the left menu, and click Advanced in the bottom right corner
On the **AirPort** tab, remove **UAWiFi** from the **Preferred Networks:** list by selecting it and clicking the minus button under the list.
From the **802.1X** tab, expand the list of **User Profiles**
- Select **WPA: UAWiFi**
- Remove it from the list by clicking the minus button at the bottom of the list
  **NOTE**: There may be multiple WPA: UAWiFi profiles in this list – remove all of them
- Click **OK**
- Click **Apply** on the **Network Preferences** window
• Open **Keychain Access** – it is an application in the /Applications/Utilities directory
• You can find it by typing **Keychain Access** into **Spotlight**
• Find the **WPA: UAWifi** key, and remove it from the keychain by selecting it and pressing the delete key on your keyboard
**NOTE:** There may be multiple WPA: UAWifi keys – remove all of them
• Restart your computer, and follow the first steps of this guide explaining how to connect to UAWiFi the first time
