Windows 7 UAWiFi Manual Setup

First, open the Network and Sharing Center by clicking on your Wireless Network icon in the bottom right corner of the screen. In the window that comes up, choose “Manage wireless networks” in the list on the left. You will be presented with a window with this at the top:

![Manage wireless networks window](image)

Click “Add”.

Choose “Manually create a network profile”. 
Be sure that you have “UAWiFi” in the Network Name field (Capitalization is important, so do NOT use “uawifi”, “UaWiFi”, “UAWIFI”, etc.) Choose “WPA2-Enterprise” as the Security Type and “AES” as the Encryption type. Then click “Next”.
Click “Change connection settings”.
On this page simply choose the “Security” tab.
Verify that Security type is still “WPA2-Enterprise”, Encryption Type is “AES”, and Choose a network authentication method is “Microsoft: Protected EAP (PEAP)” as in the above screenshot. Then click “Settings” (NOT “Advanced settings”).

6
Be sure that you have checked “Validate server certificate” and that you choose the following under Trusted Root Certification Authorities (list shown on next page):
• AddTrust External CA Root
• Class 3 Public Primary Certification Authority
• DigiCert High Assurance EV Root CA
• DST Root CA X3
• Entrust.net Certification Authority
• Entrust.net Secure Server Certification Authority
• Equifax Secure Certificate Authority
• Equifax Secure Global eBusiness CA-1
• GlobalSign Root CA
• Go Daddy Class 2 Certification Authority
• GTE CyberTrust Global Root
• Thawte Premium Server CA
• Thawte Primary Root CA
• Thawte Timestamping CA
• Verisign Class 3 Public Primary Certification Authority
• Verisign Trust Network

Be sure that you **UNCHECK** the box next to “Enable Fast Reconnect”.

Then click **Configure** next to the menu that says **Secured password (EAP-MSCHAP v2)**.

In this window be sure that the box is **UNCHECKED** and click OK. You will be returned to the previous screen. Click OK again. This will bring you back to the window shown below.
Click “Advanced settings”.
Make sure the checkbox next to “Specify authentication mode” is **CHECKED**. Choose “**User authentication**” from the drop down menu below, then click “**Save credentials**”. The following window will open up.
Enter your NetID in the first field and your password in the second and click OK.

Click “OK” until you are back to the “Manage Wireless Networks” window and you’re done!
