How to Find your MAC Address on Windows 8

How to find your MAC address on Windows 8

1) Press the Windows key to open the Start screen.
2) From the Windows Start screen, begin by typing cmd.

Search

Apps

cmd

Apps Settings Files

3) Windows search will filter the available apps until Command Prompt is displayed, select this app and the black Command Prompt window will open on the desktop.
4) In Command Prompt, type `ipconfig /all` and hit Enter (note the space before the forward-slash).
5) In the results, you may need to scroll up to view the appropriate addresses for your computer’s Ethernet adapter. The MAC and IP addresses will be listed as Physical Address and IPv4 Address, respectively.

6) **Note these addresses** as they will be needed for you to complete the DHCP registration of your computer. This process will allow you access to the UA’s local area network.
7) Please refer to the document, ‘How to Register MAC/Hardware Address for DHCP’ to register your MAC address and gain access to the UA’s local area network.
