Removing UAWiFi Settings from your computer

Before entering the new security certificate information on your computer, we suggest you remove your current UAWiFi connection completely. This will prevent problems that occur when old information is kept in the settings and should make connecting and troubleshooting much simpler. Instructions are provided below for Windows Vista/7, Macintosh OS X 10.6-10.8, and Ubuntu Linux.

Windows Vista/7

1) Open your Network and Sharing Center by first clicking on your wireless icon in your task tray (typically in the bottom-right of your screen) and choosing “Open Network and Sharing Center.”

![Open Network and Sharing Center](image)
2) Click “Manage Wireless Networks” from the list on the left.

3) Click the “UAWiFi” entry on the list, then press the “Remove” button at the top of the list.

4) Reboot your computer and reconnect to UAWiFi (Windows 7 users please view our Windows 7 Manual Setup PDF guide).
Macintosh OS X 10.7-10.8

1) Access the Network Preferences panel by clicking the wireless icon in the top-right corner of your screen and choosing “Open Network Preferences….”

2) Turn off your Wi-Fi connection by clicking “Turn Wi-Fi Off”, then click “Disconnect” to the right of 802.1X (if it is shown), then click the “Advanced” button.
3) Make sure that you’ve clicked the “Wi-Fi” tab. Click once on the UAWiFi entry, then click the minus ( - ) icon below the list of Preferred Networks. Then, click “OK.”

4) You will now need to clear out any UAWiFi information stored in your Keychain. To begin this process, enter “keychain” (without quotes) in the Spotlight searcher in the top-right corner of your screen and then click on “Keychain Access”.
5) Inside the Keychain Access program you will need to delete any references to “UAWiFi,” “guitarfish.catnet.arizona.edu,” and “sawfish.catnet.arizona.edu.” You can use the searcher within the Keychain Access program to narrow down your results by entering “UAWiFi” and “fish,” as shown in the below screenshots. Please note, you do not want to use these search terms in the Spotlight bar (farthest top-right search area) but within the Keychain Access program. Be sure you click on each one, then press the “Delete” key on your keyboard. If the system asks you to authenticate, use your computer user name and password, not your NetID and password.

6) Once these steps are complete, please restart your computer then turn your Airport on and reconnect to UAWiFi.
Macintosh OS X 10.6

Coming soon!
Ubuntu Linux 12.04

1) Click the wireless icon in the top-right corner of your screen, then choose “Edit Connections…”

2) Click the “Wireless” tab, then choose “UAWiFi” from the list, then click the “Delete” button. You may be required to authenticate with your administrative user name and password (NOT your NetID and password).
3) Click the “Delete” button.

4) You can now re-add UAWiFi with our instructions!
