Setting Auto-Negotiation

To ensure proper PC operation, please set your PC for Auto-Negotiation. This should be completed before your computer is plugged into the IP phone. Many computers will already have the correct setting but it is important to check.

1. From the Start Menu in the lower left of your screen, select Control Panel

2. From the Control Panel, select Network Connections (double click)

3. From Network Connections, select Local Area Connection (double click)

4. From Local Area Connection, select Properties under the General Tab
5. From **Local Area Connection Properties**, under the **General Tab** and next to the **Connect using:** select **Configure**

6. Under **Advanced Tab** from the window that pops up, select **Speed & Duplex** or **Media Type**, depending on which is present

7. Set **Value** to **Auto**

8. Select **OK**

For problems or additional assistance, please contact the 24/7 IT Support Center at 626-TECH.
